Type C900-301—Cylinder Interlock

The C900-301 is a compact, cylinder interlock designed and commonly installed on circuit breaker interlocking kits.

Through the use of provisions or bracketry supplied by the breaker manufacturer the C900-301 can be successfully linked to your equipment. Due to variations in breaker design options, the interlock is crafted to be ambiguous in its ability to attach to a range of cams or levers that individual manufacturers have engineered.

The C900-301 can be linked to a second C900-301 in an interlock sequence should your breaker manufacturer deem necessary.

Made from brass the C900-301 is accompanied by a 1/8" spacer (optional - please reference specific installation instructions from your breaker manufacturer for requirements) as well as two (2) fixing 6-32 screws.

As part of Kirk's SD series, the C900-301 can be used in a variety of SD interlock sequences with no compatibility issues.

OPTIONS

• Stamp Key Interchange - specify an alphanumeric code to be stamped on the cylinder face and the key (e.g. A1, A2, B1, etc. - up to 5 characters). See SD Series Data Sheet for Keys (3.4) and Terminology (4.1) for details.

NOTE: AVAILABLE IN SD ONLY
